The U.S. nuclear weapon arsenal has been the cornerstone of U.S. foreign policy since the first bomb was born in New Mexico in 1945. Almost immediately, two other bombs were used in Japan. Los Alamos National Laboratory has not quit its job as the greatest nuclear threat in the world since the first three explosions 65 years ago...

The Bomb is 65 years old. It's NOW FINALLY TIME TO RETIRE!

The first step in stopping oppression is to disarm the heart of ill intent.
The first step in cleaning up toxic waste is to stop making toxic waste.
The first step in reversing the arsenal's growth is to stop designing & creating weapons.

If you're supporting or working for a bad business, then get out of the business.
Love will overcome your fear.
